## Overview

The Diversified Growth Fund (DGF) is a growth focussed fund where the member's assets are invested in a broad range of investments seeking to grow faster than inflation whilst at the same time managing the exposure to risk. It forms part of a member's Journey Path.

Over the quarter, the DGF delivered a return of -1.3% compared to the return objective of 3.0%. Over the 12 months a return of 2.5% was achieved compared to the return objective of 12.3%. The return over a 5-year period was 13.7% compared to the return objective of 42.1%.

In keeping with the Trustee's Responsible Investment (RI) objectives, sustainability remained core to the Fund with an RI allocation of 80%.

Journey Path: The retirement Journey Path is in three phases, from growth, to pre-retirement, to retirement. During the pre-retirement phase the majority of member pension savings are gradually moved from the DGF to the Retirement Countdown Fund (RCF), over a 15-year period. The allocation then remains constant in the retirement phase.

Full details of Journey Path and Fund Objectives are set out in the Statement of Investment Principles, [here](#).

## Description

The DGF allocates investments between five groups, consisting of different asset classes, each of which has different risk and return characteristics. The balance across the asset classes is at the Investment Manager's discretion, subject to agreed guidelines.

The Investment Manager bases its decisions on its long-term risk and return assessment of different asset classes, anticipated levels of diversification, impact of changing economic conditions and the integration of responsible investment considerations.

The integration of responsible investment considerations seeks to manage investment risk with the aim of enhancing long-term portfolio returns, which is in the best interests of the members and beneficiaries of the Fund.

## Changes over the quarter

We have continued to closely monitor the Fund against its objectives and manage it within the agreed guidelines.

Persistent inflation and central bank actions continued to be the biggest drivers in markets with performance across asset classes being mixed.

Markets were relatively calm in April, with equities being supported by news of strong economic data. May, however proved to be a difficult month for most asset classes; performance was driven primarily by Industrial metals as concerns began to grow about a slowing Chinese economy. In June, equities rallied driven by technology stocks and optimism around the state of the Japanese economy.

Over the quarter, bond markets were impacted by central banks further increasing interest rates, which was linked to continued high levels of inflation.
